

Historic Buildings

New York City April 17—18, 2010

New York City has many fascinating historic buildings. This intersection (Rivington and Ludlow) is an interesting study, where one corner has been altered (lower right) —which changes the character and context of this setting. A good example of what happens when poor design replaces a distinguished building.

Above, Left: this bank building near union Square looks very similar to Louisville's Actor's Theater, above right. (Actor's Theater was designed by James Dakin—who had designed the 'Bank of America' in New York in 1834.)

Below, Left: this highrise in the shopping district looks similar to Louisville's Washington Building (which was demolished in the early 1970s.)
